GRANTS

Notes on Managing Persistent Grants:

Please confirm your configured Persistent Grant Life time, updating this only affects a new grant - ones that already exist will not be changed until they are updated/revoked:

Refresh Token and Persistent Grant Settings

PERSISTENT GRANT MAX LIFETIME

☒ Grants Do Not Expire

PERSISTENT GRANT IDLE TIMEOUT

☐ Grants Do Not Timeout Due To Inactivity

☒ 30 Days 

Clean up Settings on PingFederate:

<https://docs.pingidentity.com/bundle/pingfederate-100/page/egg1564002983568.html> . Please note: In a clustered PingFederate environment, **the cleanup task runs only on the console node**. If adjustments are required, make them on the console node. No changes are required on any of the engine nodes.

- Edit the `timer-intervals.xml` <code>pf_install>/pingfederate/server/default/data/config-store directory.
- Update the `AccessGrantCleanerInterval` value (in milliseconds).
The default value is `86400000`, which is 24 hours.
- Update the `ExpiredGrantBatchSize` value.
The following example shows an updated value of 400.

```
file, located in the<?xml version="1.0" encoding="UTF-8"?> <c:config
xmlns:c="http://www.sourceid.org/2004/05/config"> ... <c:item name="ExpiredGrantBatchSize">
400</c:item> ... </c:config>
```

The default value is 500.

Another option: You can choose to manage the grants in PingDirectory instead using the **Clean up Expired PingFederate Persistent Access Grants Plugin**..

<https://docs.pingidentity.com/bundle/pingfederate-100/page/cqq1564002983635.html>

CONNECTION POOLS

The **maxThreads** value is defined in the `<pf_install>/pingfederate/etc/jetty-runtime.xml` file
 Edit the System > Data Stores > LDAP Configuration > Advanced
 On the **Advanced LDAP Options** screen:

- Set the **Minimum Connections** value to 50% of the **maxThreads** value.
- Set the **Maximum Connections** value to between 75% and 100% of the **maxThreads** value, subject to the capability of the back-end database server.
