Hi All,

In class, a question was asked about modifying the HTML Adapter template to allow customers to enter text and then supply that in as part of an assertion or token.

Technically, the HTML Adapter only allows username and password.  To extend it, you would need to build a custom adapter to act or look like the HTML Adapter, othe
to join the username+extra field when posted and use OGNL to break them up.  A better option would be to use the Identifier First adapter template, make a copy and
use it.

Something like this:

open a terminal and access the PingFederate IdP Directory
cd /opt/PingIdentity/pingfederate-10.2-wal/pingfederate/server/default/conf/template
cp identifier.first.template.html identifier.first.example.html
edit the new file.

Create the new adapter:

Assign the new template:

Extend the Contract:
